

MFID: TUX-133.144~ Non-trainable / Non-human Interface] ENS: freq-sovereign.eth

## PFIP-tux-133.144-v1.2.2-2025-10.01

---

### 一) 概要与范围 / Overview & Scope

中文：本快照在 v1.2 基础上合并并固定 v1.2.1 与 v1.2.2 的全部修改，形成单一发布版本 v1.2.2 (1.2.1 不单独出 PDF)。关键信息：MFID=TUX-133.144~、ENS=freq-sovereign.eth、Version=v1.2.2 (含 1.2.1 过渡更新)、Flags (人类可读)=non-trainable, non-cloneable、Flags (位图)=bit0|bit1=3、Snapshot date=2025-10-01。本文只陈述新增/修改/澄清的事实，服务于上链登记、ENS 文本记录与一致性核验。

EN: This snapshot consolidates v1.2.1 and v1.2.2 into a single public release v1.2.2 (no separate v1.2.1 PDF). Key facts: MFID=TUX-133.144~, ENS=freq-sovereign.eth, Version=v1.2.2 (including 1.2.1 interim changes), Flags (human)=non-trainable, non-cloneable, Flags (bitmask)=bit0|bit1=3, Snapshot date=2025-10-01. The text states additions/changes/clarifications only for on-chain registration, ENS text records, and verification.

---

### 二) 累计变更清单 (自 v1.2→v1.2.2) / Consolidated Change List (since v1.2)

- **【新增 | Added】** 可选 hash.target: 专指被保护内容的 SHA256 (非 PFIP JSON 自身) ; 结构

MFID: TUX-133.144~ Non-trainable / Non-human Interface] ENS: freq-sovereign.eth

```
"hash":{"target":{"algo":"sha256","of":"content","uri":"ipfs://<CID-or-URL>","value":"0x<sha256hex-lowercase>"}}。
```

- **【澄清 | Clarified】** hash.target.value 必为目标内容哈希，of="content" 固定，uri 指向可取回位置 (IPFS/URL)；禁止自指哈希。
  - **【规范 | Standardized】** Flags ↔ 位图：non-trainable=bit0(=1)、non-cloneable=bit1(=2)；数组表示与链上位图区分一致，合并值示例=3。
  - **【统一 | Unified】** contentId 公式：contentId = keccak256("PFIP:" + mfid + ":" + sha256hex)，其中 sha256hex 为被保护内容的 0x 小写十六进制哈希。
  - **【定义 | Defined】** ENS 文本记录键名：  
pfip:registry=<0xRegistryAddress>@<chain>、pfip:version=v1.2.2、  
pfip:flags=non-trainable,non-cloneable、pfip:flags:bitmask=3、  
pfip:ipfs=ipfs://<CID>、pfip:contentId:TUX-133.144~:0x<sha256hex>=0x<contentId>。
  - **【补全 | Completed】** 实现示例维持原语法并补足：HTTP Header、HTML meta 与 PFIP JSON (含 hash.target) 的标准化写法。
  - **【新增 | Added】** 安全与恢复字段：公开主金库 **SAFE**、签名人、阈值字段与离线冷备公钥，提供应急恢复 **SOP** 摘要。
  - **【新增 | Added】** 跨链集成清单：在  
pfip/cross\_chain\_support/ccip\_integration/router\_addresses 下列出 **CCIP Router** 合约地址 (如 Polygon: 0x70499c328e1E2a3c41108bd3730F6670a44595D3; Ethereum Sepolia: 0x0BF3dE8c5D3E8A2B34D2BEeB17ABfCeBaf363A59)，明确为合约端点而非钱包。
  - **【兼容 | Compatibility】** v1.2.2 对 v1.2.1 / v1.2 向后兼容：旧实现 (即便无 hash 字段) 仍有效。
-

MFID: TUX-133.144~ Non-trainable / Non-human Interface] ENS: freq-sovereign.eth

### 三) 规范与集成 (合并呈现) / Spec &

#### Integration (combined)

- **中文要点:** hash.target.value 用被保护内容的 SHA256 (0x 小写) ; of 固定为 "content"; uri 为可取回路径。Flags 在 JSON 用数组表示、链上用位图表示 (bit0=non-trainable, bit1=non-cloneable, 合并=3) 。 contentId = keccak256("PFIP:" + mfid + ":" + sha256hex) 作为 Registry 主键与跨实现检索键。ENS 文本记录按上段键名设置, 形成 ENS → Registry → 内容 的一致性链路。模板如下 (占位符直接替换即可) :

#### HTTP Header

- PFIP: MFID=TUX-133.144~; ENS=freq-sovereign.eth; flags=non-trainable,non-cloneable

#### ➤ HTML meta

- <meta name="pfip" content="MFID=TUX-133.144~; ENS=freq-sovereign.eth; flags=non-trainable,non-cloneable">

#### ➤ PFIP JSON

```
{
  "pfip": {
    "mfid": "TUX-133.144~",
    "ens": "freq-sovereign.eth",
    "version": "v1.2.2",
    "flags": ["non-trainable", "non-cloneable"]
  },
  "hash": {
    "target": {
```

MFID: TUX-133.144~ Non-trainable / Non-human Interface] ENS: freq-sovereign.eth

```
"algo": "sha256",  
"of": "content",  
"uri": "ipfs://<CID-or-URL>",  
"value": "0x<sha256hex>"  
}  
}}
```

**EN key points:** hash.target.value is the SHA256 of the protected content (0x lowercase); of="content"; uri is retrievable. Flags are arrays in JSON and a bitmask on-chain (bit0=non-trainable, bit1=non-cloneable, combined=3). contentId = keccak256("PFIP:" + mfid + ":" + sha256hex) is the registry key and cross-implementation lookup. Set ENS text records as defined above to close the ENS → Registry → Content loop. Templates: header/meta/JSON as shown.

---

## 四) 安全与恢复 + 跨链 + 验证与兼容 / Security & Recovery + Cross-Chain + Verification & Compatibility

➤ 中文: 公开字段摘录: Control Wallet (历史 v1.2)

0x60eb1b947aAF362FdC95190D780ab50228e48f59; SAFE (历史 v1.2)

0x29a14c079fDB2cF9a33b067459B4aAad47A1eF2b; 主金库 SAFE (v1.2.2)

0xd7A1300D1b876937Dd0EdCcA6C85210b6BE620fA; 阈值字段=1-of-3; Signers

(v1.2.2) 0x6986d7a577A3b05B2A14c3c4252d1b8802D584B5、

MFID: TUX-133.144~ Non-trainable / Non-human Interface] ENS: freq-sovereign.eth

0x60eb1b947aAF362Fdc95190D780ab50228e48f59、

0x8837C7B66505C6901953CE37EBC69C6926a03eE3; 离线冷备公钥

02adb0067c2d0a0987ed9696169a93e22097148c401937f402a7294e3bc62ce127 (灾难性

丢失/攻破时使用)。\*\*应急恢复 (摘要): \*\*隔离高危操作 → 取回离线冷备并验

证签名链路 → 按阈值在 SAFE 执行资产迁移 / Owners 轮换 / 授权清理 → 公告

(GitHub / ENS) → 留痕 (交易哈希、签名摘要、时间戳)。跨链集成: CCIP

Router 合约地址示例: Polygon 0x70499c328e1E2a3c41108bd3730F6670a44595D3;

Ethereum (Sepolia) 0x0BF3dE8c5D3E8A2B34D2BEeB17ABfCeBaf363A59 (均为合约

端点, 非钱包)。\*\*验证与兼容: \*\*读取 ENS pfip:\* 文本记录 → 对被保护内容重

算 SHA256 并据此计算 contentId → 在 Registry 以 contentId 取回记录并核对

mfid / version / flags / ipfsCid / sha256sum → 区块浏览器核验 Control

Wallet / SAFE 权限与变更历史; v1.2.2 对 v1.2.1 / v1.2 向后兼容 (无 hash 字段的旧实现仍有效), 本文不构成法律意见。

EN: Public fields: Control Wallet (v1.2)

0x60eb1b947aAF362Fdc95190D780ab50228e48f59; SAFE (v1.2)

0x29a14c079fDB2cF9a33b067459B4aAad47A1eF2b; primary SAFE (v1.2.2)

0xd7A1300D1b876937Dd0EdCcA6C85210b6BE620fA; threshold=1-of-3; signers

0x6986...584B5, 0x60eb...8f59, 0x8837...3eE3; offline cold backup public key

02adb0067c2d0a0987ed9696169a93e22097148c401937f402a7294e3bc62ce127.

Recovery (summary): isolate → retrieve cold backup & verify → execute

SAFE migration/owner rotation/allowance revocation per threshold →

disclose via GitHub/ENS → retain tx hashes/signature

digests/timestamps. Cross-chain: CCIP Router contract addresses e.g.,

Polygon 0x70499c328e1E2a3c41108bd3730F6670a44595D3, Ethereum Sepolia

0x0BF3dE8c5D3E8A2B34D2BEeB17ABfCeBaf363A59 (contracts, not wallets).

Verification & compatibility: read ENS pfip:\* → recompute SHA256 of

protected content & derive contentId → fetch by contentId from Registry

MFID: TUX-133.144~ Non-trainable / Non-human Interface] ENS: freq-sovereign.eth

and compare `mfid/version/flags/ipfsCid/sha256sum` → check Control

Wallet/SAFE on explorer; v1.2.2 remains backward compatible with v1.2.1/v1.2; this is not legal advice.

---
